Table of Contents

1 Using the Polychrony GUI under Eclipse

In order to be able to access all the needed libraries, you have to start Eclipse from a console.

Prerequisites: The Signal ToolBox must be installed in your environment and its setup has been executed[1] .

You can now start Eclipse in the console.

To open a graphical Signal file (suffixed by .gpk),

- Right click on the selected file,
- Select "***Polychrony GUI->Open with Polychrony GUI***".

To open the Polychrony GUI view (to create a new Signal application), you have to

- open the ***Window*** menu,
- click on the ***Show view --> other***
- and select the ***"Polychrony GUI"*** in the ***"Polychrony GUI"*** menu.

When the GUI is opened, you can use the inline help.

---

1 command:

- Unix : source *<Your_SignalToolBox_root_installation>*/PolychronyToolset_setup
- Windows: call *<Your_SignalToolBox_root_installation>*\PolychronyToolset_setup.bat
